PRODUCT INFORMATION

PRODUCT DESCRIPTION

GP3741 NOVO-FLO SOLVENT / ACID RESISTANT COATING is a pigmented, high-build, high solids Novolac epoxy which resists vapor, splash, spillage or immersion to certain aggressive acids, alkalis and solvents. This material bonds aggressively to properly prepared and primed substrates, protecting the substrate from damaging chemicals.

ADVANTAGES

- Protects against certain aggressive acids, alkalis and solvents. Refer to the Chemical Resistance Guide.
- High bond strength
- Rapid cure
- Initial high gloss
- Moisture tolerant

TYPICAL USES

GP3741 NOVO-FLO SOLVENT / ACID RESISTANT COATING protects surfaces in petroleum refineries, chemical processing, water treatment, waste water treatment, power utilities, pulp and paper, food and beverage and pharmaceutical facilities.

LIMITATIONS

- Slab on grade requires vapor/moisture barrier.
- Substrate must be structurally sound and free of bond inhibiting contaminants.
- During installation and initial cure cycle, substrate and ambient air temperature must be at a minimum of 50°F (10°C). Substrate temperature must be least 5°F (-15C) above the dew point (for lower temperature installation contact the Technical Service Department).
- When required, adequate ventilation shall be provided and proper clothing and respirators worn.
- **Strictly adhere to published coverage rates.**

SURFACE PREPARATION

Proper inspection and preparation of the substrate to receive resinous material is critical. Read and follow the "Instructions for Concrete Surface Preparation" (Form G-1) for complete details.

APPLICATION

APPLICATION INSTRUCTIONS

1. Premix 3741A (resin) using a low speed drill and Jiffy blade. Mix for one minute and until uniform, exercising caution not to whip air into the material.
2. Add 2 parts 3741A (resin) to 1 part 3741B (hardener) by volume. Mix with low speed drill and Jiffy blade for three minutes and until uniform.
3. Apply 3741 using a 1/4" nap roller at a spread rate of 160-240 sq. ft. per gallon evenly, with no puddles making sure of uniform coverage. **Take care not to puddle materials and insure even coverage.**
4. Allow to cure 24 hours before opening to light foot traffic and water exposure.

Note: Epoxy materials will appear to be cured and "dry to touch" prior to full chemical cross linking. Allow epoxy to cure 2-3 days prior to exposure to water or other chemicals for best performance.

CLEANUP

Clean up mixing and application equipment immediately after use. Use toluene or xylene. Observe all fire and health precautions when handling or storing solvents.

SAFETY

Refer to the MSDS sheet before use.
